COMPUTER SKILLS *Statistical Packages:* R (including GIS packages: sf, rgdal, rgeos, sp, raster)
 Languages: Python, Unix shell scripting, R Markdown
 Applications: R Shiny, Knitr, L^AT_EX, Vim, MS Office, qGIS, ArcGIS, GEOS, LSF
 Operating Systems: Unix/Linux, Mac, Windows

SOFTWARE

automagic

Automagically install packages necessary to run R code.

<https://github.com/cole-brokamp/automagic>

rize

Dockerize R shiny apps.

<https://github.com/cole-brokamp/rize>

RFinfer

A package for R that implements novel versions of the random forest from my dissertation research, produces confidence intervals and prediction variances.

<https://cran.r-project.org/web/packages/RFinfer/index.html>

aiRpollution

A package for R that assesses exposure to air pollution components in Cincinnati, Ohio. Also includes other convenience functions for extracting Cincinnati GIS variables.

<https://github.com/cole-brokamp/aiRpollution>

DeGAUSS

A family of standalone software packages designed for Decentralized Geomarker Assessment for multi Site Studies. Allows for coordinate extraction from addresses and estimation of environmental exposures and community characteristics without exposing private health information outside of the institution.

<https://github.com/cole-brokamp/DeGAUSS>

geocodeCAGIS

A package for R that uses exact address files from CAGIS to geocode addresses in Cincinnati, Ohio and link to address based information from the City of Cincinnati and the Hamilton County Auditor's Office.

<https://github.com/cole-brokamp/geocodeCAGIS>

geocoder

A software package for linux that geocodes using TIGER/Line data. Offline geocoding is useful when dealing with private health information. This software is also implemented on a internal server, available to researchers at CCHMC.

<https://github.com/cole-brokamp/geocoder>

R Shiny

Several R Shiny Applications.

<http://colebrokamp.com/shiny>

AWARDS AND MEMBERSHIPS

CCHMC Division of Biostatistics & Epidemiology Top Research Achievement	2017
CCHMC Division of Biostatistics & Epidemiology Top Publication	2017
CCHMC Division of Biostatistics & Epidemiology Travel Award	2016
CCHMC Arnold W. Strauss Fellowship Award	2016
Member - International Society of Exposure Science	2014 – present
Member - American Statistical Association	2013 – present
Choose Ohio First Scholarship Recipient	2010 – 2015
University Graduate Scholarship Recipient	2010 – present
Distinguished Honors Scholar, UC Engineering	2010
University of Cincinnati Alumni Scholarship	2008 – 2009

Grant Reviewer for:

Puerto Rico Science, Technology & Research Trust

Member of Strategic Plan Steering Committee,

Division of Biostatistics & Epidemiology, Cincinnati Children's Hospital Medical Center 2017

Chair of the Ensemble Learning for Air Pollution Exposure Assessment Session,

International Society of Exposure Science Annual Meeting 2017

Chair of the Land Use Regression Modeling Session,

International Society of Exposure Science Annual Meeting 2016

Co-founded Biostatistics Student Journal Club,

Department of Biostatistics, University of Cincinnati 2013

Student Representative to Graduate Education Committee,

Department of Pharmacology, University of Cincinnati 2010 – 2011

GRANT SUPPORT

Active**Internal Processes and Methods Award - Center for Clinical & Translational Science & Training***Using Machine Learning to Supplement Electronic Health Record databases with Individual Socioeconomic Status*

Brokamp, PI (9/1/17 - 12/31/17)

Retrospective epidemiological studies are often created using electronic health record databases. Although these records are “wide”, they are not “deep” with respect to individual level demographic data. We propose a novel machine learning based approach that uses open city and auditor databases to predict individual level income and family socioeconomic status. This will solve the urgent problem of unconfounding for individual SES in the execution of EHR based research.

Role: PI

NIH/NIEHS 1R01ES019890-01*Neurobehavioral and Neuroimaging Effects of Traffic Exposure in Children*

Ryan, PI (7/1/12 - 3/31/18)

The association between exposure to traffic-related air pollutants (TRAP) during early childhood and neurobehavioral and neuroimaging outcomes has not been thoroughly examined. The objective of the proposed study is to determine if children exposed to increased levels of TRAP during critical time periods of brain development have altered neurobehavior in childhood as measured by a battery of valid and reliable tests and to assess the physiologic impact of TRAP exposure on brain structure, organization, and function using quantitative magnetic resonance imaging (MRI). These results will fill important gaps in current scientific knowledge related to the relationship between TRAP exposure and neurobehavior and central nervous system effects.

Role: Biostatistician

NIH 5K23AI121325

Biomarkers and Risk Stratification in Pediatric Community

Florin, PI (01/01/16 - 12/31/19)

The extensive variation in care, in addition to the lack of evidence-based decision aids, highlights the critical need for an improved understanding of disease severity and tools to guide management for pediatric CAP. The proposed research will address this important knowledge and practice gap.

Role: Biostatistician

NIH/NINDS R01 NS030678

Comparison of Hemorrhagic & Ischemic Stroke Among Blacks and Whites

Kleindorfer, PI (04/01/15 - 03/31/20)

Tracking of population-based stroke incidence in the Greater Cincinnati and Northern Kentucky region, with special emphasis on stroke in the young and stroke recurrence.

Role: Biostatistician

U01HG008666

EMERGE: Better Outcomes for Children: Promoting Excellence in Healthcare Genomics to Inform Policy

Harley, PI (09/01/15 - 05/31/19)

We have developed algorithms for the electronic health record (EHR), led the Pediatric Workgroup, developed pharmacogenomics, evaluated the preferences of parents and caregivers to advance genomic medicine and assimilated technical advances into our EHR. The eMERGE effort has become the basic fabric of the institutional initiative to incorporate the extraordinary advances of genetics, genomics and the electronic medical record into healthcare.

Role: Biostatistician

Internal ARC - Cincinnati Children's Hospital

Mother Infant Data Hub

Marsolo, PI (7/1/15 - 7/1/18)

The goals of this award are to create a research database of comprehensive clinical coverage for neonates born throughout the greater Cincinnati area including linkage of medical records to external data sets at the individual- and area-level during the first year of life.

Role: Biostatistician

Internal ARC - Cincinnati Children's Hospital

CARPE DIEM

Ambroggio, PI (7/1/15 - 7/1/18)

The goals of this award are to develop a diagnostic tool based on the urinary metabolome that can differentiate between viral and bacterial community-acquired pneumonia in children.

Role: Biostatistician

Internal - University of Cincinnati

Epidemiology of Rural/Urban Disparities in Stroke

Jasne, PI (1/1/17 - 12/31/17)

The goal of this project is to identify stroke incidence disparities among rural and urban geographic areas.

Role: Co-I

Pending**NIH/NIEHS**

Lifetime Exposure to Ambient Air Pollution and Adolescent Cardiometabolic Health

Braun/Ryan, PI (12/1/17 - 11/30/22)

The objective of this proposal is to determine whether exposure to air pollution during critical periods of growth and development is associated with altered growth trajectories, increased adiposity, altered lipid profiles, and vascular dysfunction during adolescence.

Role: Biostatistician

NIH R01FP00013153

Mapping Environmental Contributions to Rapid Lung Disease Progression in Cystic Fibrosis

Sczcesniak, PI (4/1/18 - 3/31/23)

This project will incorporate established environmental contributors and novel data on community characteristics into functional data analysis and joint longitudinal modeling in order to transform dynamic prediction and clinical surveillance of rapid pulmonary decline.

Role: Co-I

NIH R01CA221960

AltAnalyze-CisBP: A comprehensive solution for splicing pathway discovery in cancer

Salomonis, PI (9/1/17 - 8/31/22)

We are building a powerful toolkit to identify a relatively new class of therapeutic targets for cancer therapy. In cancer, the abnormal splicing of gene products can initiate cancer and lead to worse outcomes. With the completion of these aims, cancer researchers will be able to evaluate and understand the causes of aberrant gene splicing to target new pathways in diverse cancers.

Role: Biostatistician

NIH R01GM126109

CellHarmony: Integration and analysis of single-cell compendiums

Salomonis, PI (9/1/17 - 8/31/20)

Our understanding of human disease is being transformed by new technologies to examine the genomes of individual cells. We are developing novel ultra-sensitive approaches for finding rare populations of cells, distinguished by novel gene signatures that could predispose to human disease and ultimately lead to crucial diagnostics.

Role: Biostatistician

NIH R01FD006021

Predictive Molecular Marks of Lung Function Decline in CF

Ziady, PI (3/1/17 - 2/28/22)

Given our compelling cross-sectional proteomic and statistical modeling data we propose to produce an algorithm for lung function decline that is based on the integration of longitudinal behavior of novel disease markers with novel Functional Data (FD) analysis of FEV1.

Role: Biostatistician

NIH/NIDDK R01DK109956

Level and timing of diabetic hyperglycemia in utero: the transgenerational effect on adult morbidity (TEAM study)

Khoury, PI (9/1/17 - 8/31/22)

This transgenerational cohort study will apply innovative statistical approaches to relate timing, level and variability of maternal glycemia to morbidity in adult offspring of women with type 1 diabetes.

Role: Biostatistician

Internal ARC - Cincinnati Children's Hospital

Geospatial Research Accelerator for Precision Population Health (GRAPPH)

Beck/Ryan, PI (7/1/17 - 6/30/20)

We propose a new shared facility to meet the needs of researchers, clinicians, and community partners in the pursuit of precision population health.

Role: Co-I

Complete

Internal Arnold W. Strauss Fellowship Award - Cincinnati Children's Hospital

Assessing Exposure to Air Pollution Across Time and Space

Brokamp, PI (7/1/16 - 6/30/17)

The primary objective of this award is to combine satellite-based measurements, land use characteristics, and meteorologic data to create a hybrid spatiotemporal model for ground level exposure to particulate matter using exact addresses and dates.

Role: PI

Internal Processes and Methods Award - Center for Clinical & Translational Science & Training

Validating a Geocoding Approach for Multi Site Studies

Brokamp, PI (1/24/17 - 6/30/17)

The primary objective of this award is to compare the geocoding (assigning latitude and longitude coordinates to addresses) accuracy of our software DeGAUSS (DEcentralized Geomarker Assessment for mUlti Site Studies) to with other common geocoding software. Furthermore, each method will be evaluated based on it ability to correctly estimate environmental exposures and community-level characteristics.

Role: PI

Academy Health

Community Health Peer Learning Program: Participant Community

Beck, PI (2/1/16 - 6/30/17)

The goals of this project are to reduce by 10% the inpatient bed-day rate for one high risk neighborhood in Cincinnati through interventions promoted by shared data and improved data visualization.

Role: Biostatistician

HEI 4784-RFA08-1/09-5

Analysis of Personal and Home Characteristics Associated with the Elemental Composition of PM_{2.5} in Indoor, Outdoor, and Personal Air in the RIOPA Study

Ryan, PI (12/1/12 - 11/30/13)

The purpose of this study is to assess the relationship between concurrent measurements of the elemental composition of PM_{2.5} in indoor, outdoor, and ambient air and the elemental composition of indoor, outdoor and personal air across individuals and cities. The study will also identify personal, home, and environmental factors significantly associated with specific elements or clusters of elements in PM_{2.5}.

Role: Biostatistician

Gerber Pediatric Research Grant, Gerber Foundation

Clinical Prediction Model for Community-Acquired Pneumonia

Florin, PI (1/1/14 - 12/31/16)

This project will use clinical data and the biomarker procalcitonin to develop a severity score used to predict the development of severe disease and complications in children with community-acquired pneumonia, the most common serious bacterial infection children and leading killer of children worldwide.

Role: Biostatistician

Last updated: September 21, 2017
